

IntegraVision **IntegraServe**

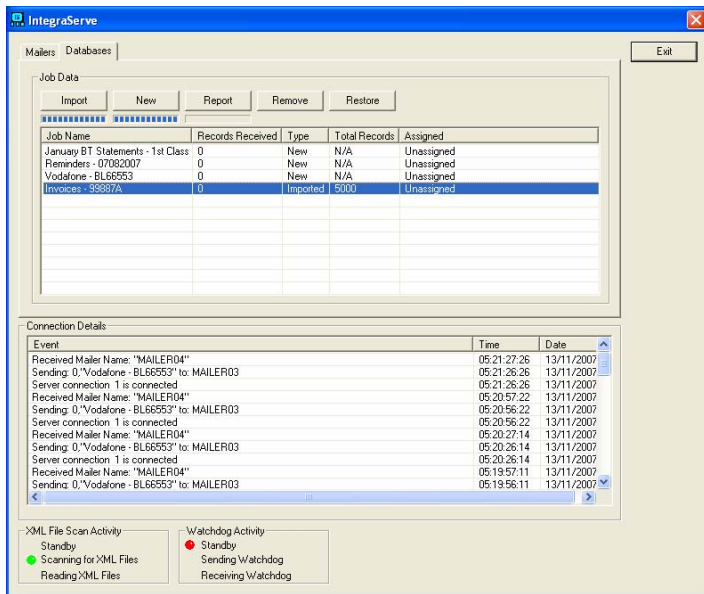

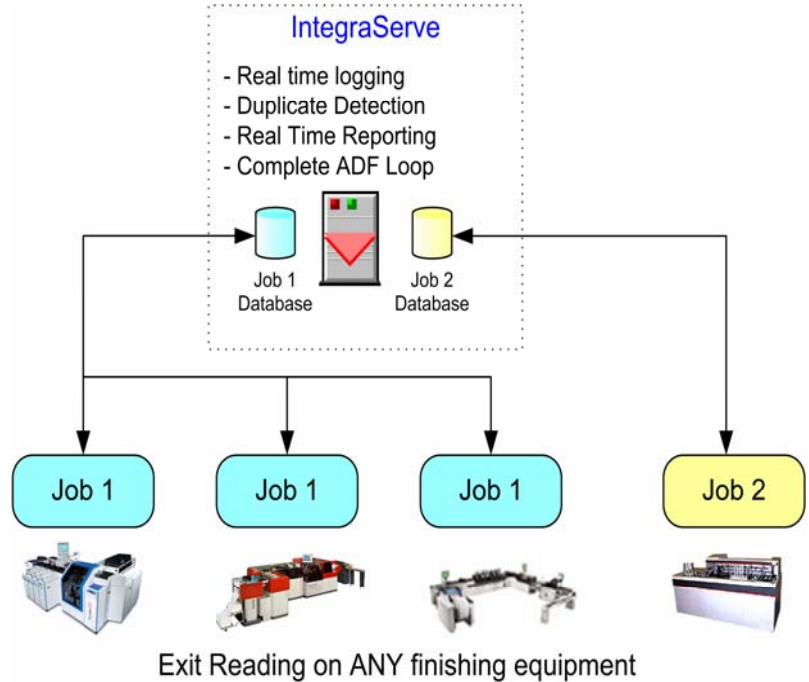

IntegraServe: job sharing and integrity management within a mixed equipment environment

Enabling network connectivity throughout your print and mailroom facility, IntegraServe provides a link to multiple IntegraVision installations on all your printing, finishing and mailing equipment.

An IntegraServe Solution combines multiple IntegraVision installations with an IntegraServe network and server. Delivering comprehensive integrity and productivity reports, IntegraServe can reconcile print and mail jobs shared across multiple print and finishing processes within a facility.

A complete database of processed, missing, and duplicated pieces is available for each job or file at any stage of a document production process. Once completed each job data file can be imported into virtually any print system for easy reprint management.

When used in combination with IntegraVision Reports, a detailed report of each individual piece within a job provides an exportable audit trail and exceptions list for re-processing.

IntegraServe maintains the crucial link between all stages of your document production process while providing real-time access to job status information.

Output Devices:

- Laser Printers
- Inkjet Bases
- Bindery Equipment
- Mail Inserters
- Mail Sort Equipmnet

Error Management:

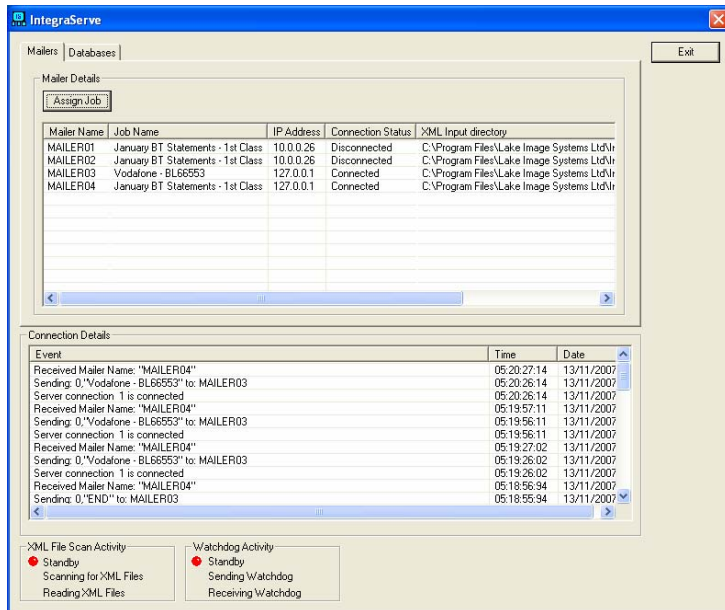

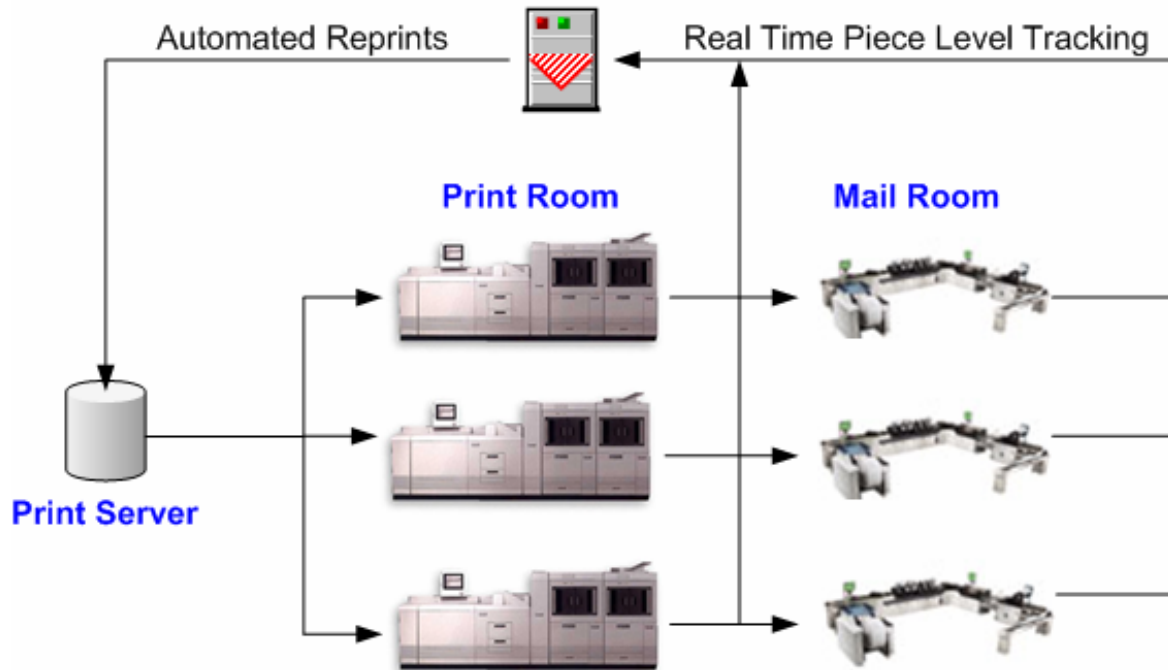

- Duplicate Detection
- Damaged Pieces
